

SCOPE OF WORK

3D Website Design & Development

Freelance Engagement — Landing Page (3D) + Internal Pages (2D)

Client Reference Site: www.convault.com

Design / Style Benchmark: <https://mont-fort.com/>

Document Status: Draft v1.0

Prepared by: Sharath Lakshman, DigiCollect Corporation

Date: September 5, 2026

Distribution: Confidential — for engaged freelancer/vendor review only

1. Project Overview

Convalt Energy's current website (www.convalt.com) uses a conventional template layout with static imagery and background video. This engagement replaces it with a modern, high-impact site: a fully 3D, animated landing page in the style of <https://mont-fort.com/>, paired with clean 2D internal pages that carry the same visual theme. The selected freelancer owns design and development end-to-end and may choose the technology stack, provided it meets the performance and browser-support expectations below.

2. Scope of Work

2.1 Landing Page — 3D Animated Experience

- Full 3D / WebGL landing (home) page only — this is the single most important deliverable of the project.
- Cinematic, scroll-driven 3D scene(s) inspired by the motion, pacing, and visual restraint of <https://mont-fort.com/>.
- Visual subject matter drawn from Convalt Energy's business: solar manufacturing, power generation, data centers, and recycling — reimagined in 3D rather than stock photography.
- Smooth camera movement / parallax tied to scroll position; hero moment, then guided reveal of key value propositions.
- Responsive behavior across desktop, tablet, and mobile, with an acceptable lightweight fallback for low-power devices (static hero image/CSS animation acceptable in place of full WebGL).
- Navigation, logo, and primary CTAs remain legible and accessible over the 3D background.

2.2 Internal Pages — 2D, Same Theme

- All remaining pages (Projects, Team, Media, Press Releases, Resources, Contact, and any project detail pages) are standard 2D pages — no 3D/WebGL required.
- Visual theme, color palette, typography, and component style must be carried over directly from the 3D landing page so the site reads as one consistent product.
- Content/information architecture to mirror the current site's structure unless the freelancer proposes an improvement for approval.
- Standard responsive layout, forms (Contact), and basic SEO fundamentals (meta tags, semantic HTML, alt text).

3. Reference Material

Reference	Purpose
Old site — www.convalt.com	Existing content, copy, structure, and information architecture to preserve/replace.
Style benchmark — https://mont-fort.com/	Target look, feel, and 3D motion language for the landing page only.

4. Technology Stack

The freelancer selects the technology stack and is expected to justify it as current, well-supported, and appropriate for a production 3D/WebGL landing experience (for example: Three.js / React Three Fiber / WebGL2, with a standard modern front-end framework for the 2D pages). The stack must be documented before development begins.

- Must support real-time 3D rendering in modern evergreen browsers (Chrome, Safari, Edge, Firefox — current and previous major version).
- Must be maintainable by DigiCollect/Convalt teams after handoff (no proprietary or abandoned frameworks).
- Source code, assets, and build instructions delivered via Git repository.

5. Deliverables

#	Deliverable	Format
1	3D landing page — design + working build	Live URL / staging build + source
2	2D internal pages (all remaining sitemap pages)	Live URL / staging build + source
3	Design files (if design tool other than code used)	Figma or equivalent, shared file
4	3D/2D asset library (models, textures, images)	Source files handed over
5	Deployed, production-ready website	Hosted on agreed environment

6. Proposed Timeline

Stage	Activities	Duration
Design	3D concept for landing page + 2D theme for internal pages, shared for approval	3 days
Development	Build landing page (3D) and internal pages (2D); freelancer's chosen stack	4 days

Timeline is indicative; the freelancer should confirm a firm schedule once the technology stack and design direction are agreed.

7. Assumptions & Exclusions

- Only the landing page requires full 3D/WebGL treatment; all other pages are 2D by design, not by budget shortfall.
- Convalt Energy will supply existing copy, project data, logos, and brand assets currently on www.convalt.com.

- Ongoing hosting, domain, and post-launch maintenance are out of scope unless separately agreed.
- Photorealistic custom 3D asset creation beyond what's needed for the landing page (e.g., full product configurators) is out of scope.

8. Acceptance & Sign-Off

This Scope of Work is agreed and accepted by the parties below.

Role	Name	Signature / Date
